## INTRODUCTION

Section 11507a(1) of Part 115, Solid Waste Management, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, requires all landfills in Michigan to “annually submit a report to the state and the county and municipality in which the landfill is located that contains information on the amount of solid waste received by the landfill during the year itemized, to the extent possible, by county, state, or country of origin and the amount of remaining disposal capacity at the landfill.”

Section 11507a(2) of Part 115 states, “By January 31 of each year, the department shall submit to the legislature a report summarizing the information obtained under subsection (1).” This Report covers the period from October 1, 2005, to September 30, 2006, and is the 11<sup>th</sup> annual Report of Solid Waste Landfilled in Michigan as compiled from the information submitted by the individual landfills.

It is recognized by the Department of Environmental Quality (DEQ) that the data may include estimates as to remaining capacity, volume, and point of origin of the waste stream reported by each landfill. Additionally, use of both standard and waste-specific conversion factors between tons and cubic yards may further alter the data accuracy.

The Waste Receipt Report forms sent by the DEQ to the landfills provide for reporting of the waste received by category. Type II waste is municipal solid waste. Type III wastes are certain wastes generated in industrial and construction/demolition activities. Certain Type III wastes are accounted for specifically in landfill waste receipt reports, primarily to calculate the financial assurance applicable to those types of wastes. These specially accounted wastes are: (1) foundry sand; (2) coal or wood ash; (3) wastewater treatment sludges; and (4) sediments from wood processing or paper manufacturing. If these wastes are placed in segregated cells or otherwise separated from other wastes in a landfill, they are labeled in this Report as “Type III Segregated Waste” (if each specially accounted waste is disposed of separately) or “Type III Mixed Waste” (if the specially accounted wastes are mixed together). For additional information on these wastes, see Sections 11525(3) and (4) of Part 115.

It should be noted that this Report addresses waste disposed of in Michigan landfills from in-state and out-of-state locations. It does not address waste originating in Michigan that is transported to locations outside Michigan for disposal. Additionally, this Report covers only waste landfilled in Michigan and does not attempt to determine the amount of waste removed from the overall waste stream prior to final disposal by such means as waste reduction and recycling. Incineration in Michigan is also not addressed except for the final landfilling of ash from municipal incinerators.

### WASTE DISPOSAL SUMMARY INFORMATION

Total waste disposal in Michigan landfills was reported at 61,877,245 cubic yards, a decrease of 1,823,297 cubic yards or down about 3 percent over the Fiscal Year (FY) 2005 data. Waste generated in Michigan decreased from 45,210,222 cubic yards in the previous reporting period to 42,841,713 cubic yards, a decrease of about 6 percent. Total imports of waste into Michigan landfills increased from the previous reporting period from 18,490,320 cubic yards to 19,035,532 cubic yards, an increase of about 3 percent. The largest source of waste imports to Michigan continues to be from Canada, with total reported imports to landfills of 12,084,907 cubic yards, up 206,816 cubic yards or about 2 percent from the FY 2005 data. Canadian waste imports equal about 20 percent of all waste disposed of in Michigan landfills. Waste reported from other states and Canada totaled about 31 percent of all solid waste disposed of in Michigan landfills. Imported waste comprised 29 percent of solid waste disposed of in Michigan landfills in the previous year. Further, the data that follow outline the out-of-state imports to Michigan over the past 11 FYs. Imports from other states increased to 6,950,625 cubic yards from 6,612,229 cubic yards, an increase of about 5 percent. This information is presented in Tables 1 and 2 and Figures 1 and 2.

Note that the quantities and percentages shown for previous years reflect corrections submitted by the landfills since the last annual report was published. An initiative begun by the DEQ in FY 2006 to reconcile quantities reported annually by the landfills with the quantities used to calculate the solid waste surcharge payments and the deposits into landfill Perpetual Care Funds has resulted in substantial data corrections for some

landfills, primarily for quantities attributed to Michigan. Therefore, Tables 1 and 2 and Figures 1 and 2 differ from previous reports.

Recognizing that the solid waste data presented in this Report are used to project revenues from the solid waste surcharge, only the solid waste volumes reported at noncaptive<sup>1</sup> disposal facilities should be used in the calculation for the 7 cents per cubic yard surcharge. For FY 2006 that amount was **59,455,023 cubic yards**<sup>2</sup>. The remaining waste was received at captive facilities, which are subject to a flat fee of \$500 to \$3,000 based upon the volume of waste received.

---

<sup>1</sup> Part 115 recognizes two types of facilities, captive and noncaptive, for the purposes of the payment of the surcharge assessed under Section 11525a. Section 11525a(10) of Part 115 states, in pertinent part, “‘captive facility’ means a landfill that accepts for disposal only nonhazardous industrial waste generated only by the owner of the landfill or a nonhazardous industrial waste landfill that is specified in section 11525(3).”

<sup>2</sup> Note that the volume reported may not be in agreement as reported by the landfills in their quarterly surcharge reports and in the past has differed by up to 3 percent.

**TOTAL DISPOSAL IN MICHIGAN LANDFILLS**

The following provides details concerning the volumes of waste disposed of in Michigan landfills and provides a breakdown of the waste imported into Michigan for disposal for all landfills that reported this information. Table 3 displays waste disposal summary information for both in-state and imported waste. Some facilities reported data from an unknown origin. All unknown waste is reported as in-state waste, however, it is expected that some of the unknown waste may be from out-of-state sources.

<b>TABLE 3</b> <b>SOLID WASTE DISPOSAL SOURCE SUMMARY</b>			
<b>WASTE TYPE</b>	<b>IN-STATE</b>	<b>IMPORTED</b>	<b>TOTAL</b>

## WASTE IMPORTS

Based on the reported information for FY 2006, the solid waste industry in Michigan imported solid waste from 15 other states and from Canada for disposal in Michigan landfills. Table 4 indicates the volume of Type II and Type III waste imported and the state or country of origin of the waste.

<b>TABLE 4 IMPORTED WASTE BY ORIGIN - FY 2006 (Volume in Cubic Yards)</b>

### FACILITY INFORMATION

The total of Type II and Type III waste disposed of and total volume at each of the 77 reporting facilities are presented in Table 6. Tables 7 and 8 list the Type II and Type III disposal volumes ranked in order of volume disposed. The highlighted type of waste in each of Tables 7 and 8 corresponds to the focus of that table. However, all waste information is also provided for reference purposes. Table 8 includes Type III waste disposed of as mixed Type III or segregated Type III waste (see the Introduction). However, landfills receiving waste disposed of in those categories are also listed in Tables 9 and 10.

## CAPACITY INFORMATION

As defined in Section 11507a(1) of Part 115, as amended by 2004 PA 39, "Remaining disposal capacity shall be calculated as the permitted capacity less waste in place for any area that has been constructed and is not yet closed plus the permitted capacity for each area that has a permit for construction under this part but has not yet been constructed." Table 11 presents projected remaining disposal capacity, capacity used during the fiscal year, estimated years of remaining noncaptive capacity (rounded to the nearest year) as reported by each facility, and a DEQ-calculated estimate of years of capacity, for each noncaptive facility, alphabetically. The data presented in Column (C) for each facility are based on site-specific calculations, which may vary among facilities. The data representing capacity used in FY 2006 and estimated years remaining, as calculated by each facility, are presented for informational purposes only. It should also be noted that the amount of waste received at each facility may differ from the capacity used during the fiscal year depending on the type of waste disposed of and the degree of compaction.

The DEQ used a simplistic formula to calculate estimated years of remaining capacity for each facility, using the data provided by each facility:  $\text{Column (A) divided by Column (B) equals Column (D)}$ . Although, in some cases, the facility-projected years of remaining capacity in Column (C) equals the calculated capacity in Column (D), it must be noted that each facility may have used a different formula to calculate their projected years of remaining capacity and, therefore, may differ from the calculations presented in Column (D).

<b>TOTAL</b>	<b>461,824,259</b>	<b>25,485,335</b>		

Based on current capacity used for FY 2006 (25,485,335 cubic yards) and total remaining capacity at noncaptive facilities (461,824,259 cubic yards), which may include additional capacity permitted<sup>3</sup> during the fiscal year and any changes in captive or noncaptive status<sup>4</sup>, and using the same calculation for deriving the values in Column (D), it is estimated that Michigan noncaptive landfills have approximately 18 years of remaining disposal capacity left. This estimate does not take into consideration any projected increase or decrease in waste disposal rates, waste diversion programs, or any county-imposed restrictions such as volume limitations, any special conditions, or the waste import/export authorizations of each county.

Table 12, below, presents estimated remaining captive disposal capacity, capacity used during the fiscal year, estimated years of remaining capacity (rounded to the nearest year) as reported by each facility, and a DEQ-calculated estimate of years of capacity for each captive facility, alphabetically. As stated above, this data was provided by each facility based on site-specific calculations, which may vary among facilities.

The DEQ used the same simplistic formula described above [Column (A) divided by Column (B) equals Column (D)] to calculate estimated years of remaining capacity for each facility. Again, although in some cases the projected years of remaining capacity in Column (C) equals the calculated capacity in Column (D), it must be noted that each facility may have used a different formula to calculate their projected years of remaining capacity and, therefore, may differ from the calculations presented in Column (D).

---

<sup>3</sup> A construction permit was issued to Carleton Farms Landfill for a 10,455,654 cubic yard expansion.

<sup>4</sup> The Detroit Edison Co. Sibley Quarry Landfill was reflected in previous Annual Reports as a captive facility.
